Rebalancing due to Passive Breaches:

➤ Further, as per Paragraph 2.9 of SEBI Master Circular as may be amended from time to time, in the event of deviation from mandated asset allocation due to passive breaches (occurrence of instances not arising out of omission and commission of the AMC), the fund manager shall rebalance the portfolio of the Scheme within 30 Business Days. In case the portfolio of the Scheme is not rebalanced within the period of 30 Business Days, justification in writing, including details of efforts taken to rebalance the portfolio shall be placed before the Investment Review Committee of the AMC. Investment Strategy:

Equities: The Scheme shall predominately invest in equity & equity related securities across market capitalisation. Stock specific risk will be minimized by investing only in those companies that have been thoroughly analyzed by the Investment team at the AMC. The following are the broad parameters/factors that shall be considered while building the portfolio of companies. The Scheme shall follow an active investment strategy.

- a) business and economic fundamentals driven by in-depth research techniques
- b) employing strong stock selection
- c) liquidity/risk considerations
- d) long term growth prospects
- e) valuation parameters

The scheme may also invest in other equity and equity related securities.

Fixed Income securities:

The Scheme may also invest in Debt and Money Market Securities/Instruments (Money Market securities include cash and cash equivalents). The Scheme aims to identify securities which offer optimal level of yields/returns, considering risk-reward ratio. With the aim of controlling risks rigorous in depth credit evaluation of the securities proposed to be invested in will be carried out by the Risk Management Team of the AMC. The credit evaluation includes a study of the operating environment of the issuer, the short as well as long-term financial health of the issuer. Rated debt instruments in which the Scheme invests will be of investment grade as rated by a credit rating agency. The AMC may consider the ratings of such Rating Agencies as approved by SEBI to carry out the functioning of rating agencies.

The Scheme may invest in securitised debt.

The Scheme may undertake repo transactions in corporate debt securities in accordance with the directions issued by RBI and SEBI from time to time. Such investment shall be made subject to the guidelines which may be prescribed.

In addition, the investment team of the AMC will study the macro economic conditions, including the political, economic environment and factors affecting liquidity and interest rates.

The AMC would use this analysis to attempt to predict the likely direction of interest rates and position the portfolio appropriately to take advantage of the same.

The Scheme may also invest a part of its corpus in American Depository Receipts (ADRs), Global Depository Receipts (GDRs), foreign securities, Investments through primary market such as IPOs, securities received through corporate actions, private placements etc., bonds and mutual funds and such other instruments as may be allowed under the Regulations from time to time. The Scheme may engage in Stock Lending activities. The Scheme may invest in derivatives such as Futures & Options and such other derivative instruments like Stock/ Index Futures, Interest Rate Swaps, Forward Rate Agreements or such other derivative instruments as may be introduced and permitted by SEBI from time to time, subject to approval from SEBI as required. The Scheme may invest in derivative for the purpose of hedging, portfolio balancing and other purposes as may be permitted under the Regulations, including covered call. Hedging using Interest Rate Futures could be perfect or imperfect, subject to applicable regulations.

The Scheme can invest in preference shares and units of REITs and InvITs.

Further, the Scheme may invest in other schemes managed by the AMC or in the schemes of any other Mutual Funds in terms of the prevailing Regulations. As per the Regulations, no investment management fees will be charged for such investments. For the present, the Scheme does not intend to enter into underwriting obligations. However, if the Scheme does enter into an underwriting agreement, it would do so after complying with the Regulations and with the prior approval of the Board of the AMC/Trustee.

For detailed derivatives strategies and illustrations, please refer to SAI.

RISK FACTORS:

Scheme Specific Risk Factors:

The scheme allows investments across Small, Mid and Large cap stocks, hence provides flexibility to maintain the composition of scheme as per the assessment by the Fund Manager.

Dynamic nature of the investment strategy may result in the portfolio undergoing changes in the market capitalization exposure/allocation (between large, mid and small caps) from time to time depending on the Fund Manager's views on specific segments. For e.g. a portfolio with large cap stock tilt may shift towards a mid & small cap stock tilt if the risk-reward outlook for the latter improves. Changes to market cap allocation may impact the portfolio from market risk and liquidity risk and lead to increased volatility.

➤ Risk associated with investing in equities and equity related instruments:

1. The value of the Schemes' investments, may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or any other appropriate authority policies and other political and economic developments which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets. Consequently, the NAV of the Units of the Schemes may fluctuate and can go up or down.
2. Investors may note that AMC/Fund Manager's investment decisions may not be always profitable, as actual market movements may be at variance with anticipated trends. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of these investments. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Schemes to make intended securities purchases due to settlement problems could cause the Schemes to miss certain investment opportunities.
3. The Mutual Fund may not be able to sell / lend out securities, which can lead to temporary illiquidity. There are risks inherent in securities lending, including the risk of failure of the other party, in this case the approved intermediary to comply with the terms of the agreement. Such failure can result in a possible loss of rights to the collateral, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of corporate benefits accruing thereon.
4. Investors may note that the dividend is due only when declared and there is no assurance that a company (even though it may have a track record of payment of dividend in the past) may continue paying dividend in future. As such, the schemes are vulnerable to instances where investments in securities may not earn dividend or where lesser dividend is declared by a company in subsequent years in which investments are made by the scheme. As the profitability of companies are likely to vary and have a material bearing on their ability to declare and pay dividend, the performance of the schemes may be adversely affected due to such factors.
5. Securities, which are not quoted on the stock exchanges, are inherently illiquid in nature and carry a larger amount of liquidity risk. Within the Regulatory limits, the AMC may choose to invest in unlisted securities.
6. While securities that are listed on the stock exchange carry lower liquidity risk, the ability to sell these investments is limited by the overall trading volume on the stock exchanges. The liquidity of the Schemes' investments is inherently restricted by trading volumes in the securities in which it invests.
7. Fund manager endeavours to generate returns based on certain past statistical trend. The performance of the schemes may get affected if there is a change in the said trend. There can be no assurance that such historical trends will continue.
8. In case of abnormal circumstances it will be difficult to complete the square off transaction due to liquidity being poor in stock futures/spot market. However fund will aim at taking exposure into relatively liquid stocks where there will be minimal risk to square off the transaction. The Schemes investing in foreign securities will be exposed to settlement risk, as different countries have different settlement periods.
9. The schemes are also vulnerable to movements in the prices of securities invested by the schemes which again could have a material bearing on the overall returns from the schemes. These stocks, at times, may be relatively less liquid as compared to growth stocks.
10. Changes in Government policy in general and changes in tax benefits applicable to mutual funds may impact the returns to investors in the Schemes or business prospects of the Company in any particular sector.
11. In case of warrants, a relatively small movement in the price of the underlying security results in a disproportionately large movement, unfavourable or favourable, in the price of the warrant. The prices of warrants can therefore be volatile.
12. It is essential for the investors to understand that the right to subscribe which a warrant confers is invariably limited in time with the consequence that if the investor fails to exercise this right within the predetermined timeline then the investment becomes worthless. Investment in a warrant

can result in a total loss of the money invested plus any commission or other transaction charges.

➤ **Risks associated if investment made in small/mid cap companies:**

While small/mid cap stocks give an opportunity to go beyond the usual large cap stocks and present possible higher capital appreciation, it is important to note that small/mid cap stocks can be riskier and more volatile on a relative basis.

Small/Midcap companies carry large amount of liquidity risk compared to the large cap companies, as the ability to sell is limited by overall trading volume in the securities, which it invests.

➤ **Risk associated with investment in fixed income and money market securities**

- **Market Risk/Interest Rate Risk:** The Net Asset Value (NAV) of the Scheme(s), to the extent invested in fixed income and money market securities, will be affected by changes in the general level of interest rates. The NAV of the Scheme(s) is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.
- **Liquidity Risk:** The liquidity of a security may change depending on market conditions leading to changes in the liquidity premium linked to the price of the security. At the time of selling the security, the security can become illiquid leading to loss in the value of the portfolio.
- **Credit Risk:** Investments in fixed income securities and money market instruments are subject to the risk of an issuer's inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer.
- **Price Risk:** Government securities where a fixed return is offered run price-risk like any other fixed income security. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates. The new level of interest rate is determined by the rates at which government raises new money and/or the price levels at which the market is already dealing in existing securities. The price-risk is not unique to Government Securities. It exists for all fixed income securities. However, Government Securities are unique in the sense that their credit risk generally remains zero. Therefore, their prices are influenced only by movement in interest rates in the financial system.
- **Reinvestment Risk:** This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.
- **Regulatory Risk:** Changes in government policy in general and changes in tax benefits applicable to Mutual Funds may impact the returns to investors in the Scheme.
- **Risks associated with investment in unlisted securities:** Except for any security of an associate or group company, the underlying scheme(s) have the power to invest in securities which are not listed on a stock exchange or receive unlisted securities which in general are subject to greater price fluctuations, less liquidity and greater risk than those which are traded in the open market. These securities may lack a liquid secondary market and there can be no assurance that the underlying scheme(s) will realise their investments in unlisted securities at a fair value.
- **Settlement risk:** The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. By the same rationale, the inability to sell securities held in the Scheme's portfolio due to the extraneous factors that may impact liquidity would result, at times, in potential losses to the Scheme.
- Different types of fixed income securities in which the Scheme(s) would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly, the Scheme(s) risk may increase or decrease depending upon its investment pattern. e.g. corporate bonds carry a higher level of risk than Government securities.
- The AMC may, considering the overall level of risk of the portfolio, invest in lower rated / unrated securities offering higher yields as well as zero coupon securities that offer attractive yields. This may increase the absolute level of risk of the portfolio.
- As zero coupon securities does not provide periodic interest payments to the holder of the security, these securities are more sensitive to changes in interest rates. Therefore, the interest rate risk of zero coupon securities is higher. The AMC may choose to invest in zero coupon securities that offer attractive yields. This may increase the risk of the portfolio.
- The Scheme(s) at times may receive large number of redemption requests, leading to an asset-liability mismatch and therefore, requiring the investment manager to make a distress sale of the securities leading to realignment of the portfolio and consequently resulting in investment in lower yield instruments.

➤ **Risk associated with investing in units of mutual funds**

The scheme may make investments in units of mutual funds. Investments in schemes of mutual funds are subject to market risks and there is no assurance or guarantee that the objectives of the scheme will be achieved. Further, any investment in mutual funds is also subject to risk factors outlined in the offer document of the mutual fund and an adverse performance of a mutual fund scheme in which the scheme has made investments could adversely impact the scheme's performance and NAV of the scheme.

➤ **Risk associated with investment in ADR/GDR/Foreign equity Securities/ Overseas Mutual Funds/Overseas ETFs:**

It is AMC's belief that the investment in ADRs/GDRs/overseas securities offers new investment and portfolio diversification opportunities into multi-market and multi-currency products. However, such investments also entail additional risks. Such investment opportunities may be pursued by the AMC provided they are considered appropriate in terms of the overall investment objectives of the Schemes. Since the Schemes would invest only partially in ADRs/GDRs/overseas securities, there may not be readily available and widely accepted benchmarks to measure performance of the Schemes. To manage risks associated with foreign currency and interest rate exposure, the Fund may use derivatives for efficient portfolio management including hedging and in accordance with conditions as may be stipulated by SEBI/RBI from time to time.

To the extent that the assets of the Schemes will be invested in securities denominated in foreign currencies, the Indian Rupee equivalent of the net assets, distributions and income may be adversely affected by the changes in the value of certain foreign currencies relative to the Indian Rupee. The repatriation of capital also may be hampered by changes in regulations concerning exchange controls or political circumstances as well as the application to it of the other restrictions on investment.

Offshore investments will be made subject to any/all approvals, conditions thereof as may be stipulated by SEBI/RBI and provided such investments do not result in expenses to the Fund in excess of the ceiling on expenses prescribed by and consistent with costs and expenses attendant to international investing. The Fund may, where necessary, appoint other intermediaries of repute as advisors, custodian/sub-custodians etc. for managing and administering such investments. The appointment of such intermediaries shall be in accordance with the applicable requirements of SEBI and within the permissible ceilings of expenses. The fees and expenses would illustratively include, besides the investment management fees, custody fees and costs, fees of appointed advisors and sub-managers, transaction costs, and overseas regulatory costs.

Investors are requested to note that the costs associated with overseas investments like advisory fees (other than those expenses permissible under regulation 52 of SEBI Regulations) would not be borne by the scheme.

RISKS ASSOCIATED WITH INVESTING IN DERIVATIVES:

1. The Schemes may use various derivative products as permitted by the Regulations. Use of derivatives requires an understanding of not only the underlying instrument but also of the derivative itself. Other risks include the risk of mis-pricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.
2. The Fund may use derivatives instruments like Stock Index Futures, Interest Rate Swaps, Forward Rate Agreements or other derivative instruments for the purpose of hedging and portfolio balancing, as permitted under the Regulations and guidelines. Usage of derivatives will expose the Schemes to certain risks inherent to such derivatives.
3. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.
4. Thus, derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have a large impact on their value.
5. The risks associated with the use of derivatives are different from or possibly greater than the risks associated with investing directly in securities and other traditional investments.
6. The specific risk factors arising out of a derivative strategy used by the Fund Manager may be as below:
 - The risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.
 - **Execution Risk:** The prices which are seen on the screen need not be the same at which execution will take place
 - **Basis Risk:** This risk arises when the derivative instrument used to hedge the underlying asset does not match the movement of the underlying asset being hedged
 - Exchanges could raise the initial margin, variation margin or other forms of margin on derivative contracts, impose one sided margins or insist that margins be placed in cash. All of these might force positions to be unwound at a loss, and might materially impact returns.
 - The derivative contracts at times are undertaken with various counterparties. These counterparties may not be able to meet the obligations under such derivative contracts. This would lead to credit risk in derivative transactions. Hence, derivative trades are undertaken with approved counterparties or through exchanges. This mitigates credit risk on derivative transactions.

RISKS FOR WRITING COVERED CALL OPTIONS FOR EQUITY SHARES

A call option gives the holder (buyer) the right but not the obligation to buy an asset by a certain date for a certain price. Covered calls are an options strategy where a person holds a long position in an asset and writes (sells) call options on that same asset to generate an income stream. The Scheme may write call options under covered call strategy, as permitted by the regulations. Risks associated thereto are mentioned below:

- a) Writing call options are highly specialized activities and entail higher than ordinary investment risks. In such investment strategy, the profits from call option writing is capped at the option premium, however the downside depends upon the increase in value of the underlying equity shares. This downside risk is reduced by writing covered call options.

- b) The Scheme may write covered call option only in case it has adequate number of underlying equity shares as per regulatory requirement. This would lead to setting aside a portion of investment in underlying equity shares. If covered call options are sold to the maximum extent allowed by regulatory authority, the scheme may not be able to sell the underlying equity shares immediately if the view changes to sell and exit the stock. The covered call options need to be unwound before the stock positions can be liquidated. This may lead to a loss of opportunity, or can cause exit issues if the strike price at which the call option contracts have been written become illiquid. Hence, the scheme may not be able to sell the underlying equity shares, which can lead to temporary illiquidity of the underlying equity shares and result in loss of opportunity.
- c) The writing of covered call option would lead to loss of opportunity due to appreciation in value of the underlying equity shares. Hence, when the appreciation in equity share price is more than the option premium received the scheme would be at a loss.
- d) The total gross exposure related to option premium paid and received must not exceed the regulatory limits of the net assets of the scheme. This may restrict the ability of Scheme to buy any options.

➤ **Benefits of using Covered Call strategy in Mutual Funds**

The covered call strategy can be followed by the Fund Manager in order to hedge risk thereby resulting in better risk adjusted returns of the Scheme. The strategy offers the following benefits:

- Hedge against market risk - Since the fund manager sells a call option on a stock already owned by the mutual fund scheme, the downside from fall in the stock price would be lower to the extent of the premium earned from the call option.
- Generating additional returns in the form of option premium in a range bound market.

Thus, a covered call strategy involves gains for unit holders in case the strategy plays out in the right direction.

Risks associated with investing in Securitised Debt:

A securitization transaction involves sale of receivables by the originator (a bank, non-banking finance company, housing finance company, microfinance companies or a manufacturing/service company) to a Special Purpose Vehicle (SPV), typically set up in the form of a trust. Investors are issued rated Pass Through Certificates (PTCs), the proceeds of which are paid as consideration to the originator. In this manner, the originator, by selling his loan receivables to an SPV, receives consideration from investors much before the maturity of the underlying loans. Investors are paid from the collections of the underlying loans from borrowers. Typically, the transaction is provided with a limited amount of credit enhancement (as stipulated by the rating agency for a target rating), which provides protection to investors against defaults by the underlying borrowers. Generally available asset classes for securitization in India are:

- o Commercial vehicles
- o Auto and two wheeler pools
- o Mortgage pools (residential housing loans)
- o Personal loan, credit card and other retail loans
- o Corporate loans/receivables
- o Microfinance receivables

In pursuance to SEBI communication dated: August 25, 2010, given below are the requisite details relating to investments in Securitised debt.

➤ **Risk factors associated with investments in Perpetual Debt Instrument (PDI)**

Perpetual Debt instruments are issued by Banks, non-banking financial institutions (NBFCs) and corporates to improve their capital profile. Some of the PDIs issued by Banks which are governed by the Reserve Bank of India (RBI) guidelines for Basel III Capital Regulations are referred to as Additional Tier I (AT1 bonds). While there are no regulatory guidelines for issuance of PDIs by corporate bodies, NBFCs issue these bonds as per guidelines issued by RBI. The instruments are treated as perpetual in nature as there is no fixed maturity date. The key risks associated with these instruments are highlighted below:

Risk on coupon servicing

Banks

As per the terms of the instruments, Banks may have discretion at all times to cancel distributions/payment of coupons.

NBFCs

While NBFCs may have discretion at all times to cancel payment of coupon, coupon may also be deferred (instead of being cancelled), in case paying the coupon leads to breach of capital ratios.

Corporates

Corporates usually have discretion to defer the payment of coupon. However, the coupon is usually cumulative and any deferred coupon shall accrue interest at the original coupon rate of the PDI.

Risk of write-down or conversion into equity

Banks

As per the regulatory requirements, Banks have to maintain a minimum Common Equity Tier-1 (CET-1) ratio of Risk Weighted Assets (RWAs), failing which the AT-1 bonds can get written down. Further, AT-1 Bonds are liable to be written down or converted to common equity, at the discretion of RBI, in the event of Point of Non Viability Trigger (PONV). PONV is a point, determined by RBI, when a bank is deemed to have become non-viable unless there is a write off/conversion to equity of AT-1 Bonds or a public sector capital injection happens. The write off/conversion has to occur prior to public sector injection of capital.

This risk is not applicable in case of NBFCs and Corporates.

Risk of instrument not being called by the Issuer

Banks

The issuing banks have an option to call back the instrument after minimum period as per the regulatory requirement from the date of issuance and specified period thereafter, subject to meeting the RBI guidelines. However, if the bank does not exercise the call on first call date, the Scheme may have to hold the instruments for a period beyond the first call exercise date.

NBFCs

The NBFC issuer has an option to call back the instrument after minimum period as per the regulatory requirement from date of issuance and specified period thereafter, subject to meeting the RBI guidelines. However, if the NBFC does not exercise the call option the Scheme may have to hold the instruments for a period beyond the first call exercise date.

Corporates

There is no minimum period for call date. However, if the corporate does not exercise the call option, the Scheme may have to hold the instruments for a period beyond the call exercise date.

➤ **RISKS ASSOCIATED WITH STOCK LENDING:**

The Scheme will not engage in Short Selling activity.

Securities lending is lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed.

The risks in security lending consist of the failure of intermediary / counterparty, to comply with the terms of agreement entered into between the lender of securities i.e. the Scheme and the intermediary / counterparty. Such failure to comply can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The scheme may not be able to sell lent out securities, which can lead to temporary illiquidity & loss of opportunity.

Investors are requested to refer to section "How will the Scheme allocate its assets?" for maximum permissible exposure to Stock Lending & Borrowing.

Subject to the Regulations and the applicable guidelines, the Scheme there under may, if the Trustee permits, engage in stock lending. Stock lending means the lending of stock to another person or entity for a fixed period of time, at a negotiated compensation. The securities lent will be returned by the borrower on expiry of the stipulated period. The Scheme, under normal circumstances, shall not have exposure of more than 50% of its net assets in stock lending. The AMC shall report to the Trustee on a quarterly basis as to the level of lending in terms of value, volume and the names of the intermediaries and the earnings/losses arising out of the transactions, the value of collateral security offered etc. The Trustees shall offer their comments on the above aspect in the report filed with SEBI under sub-regulation 23(a) of Regulation 18.

Risks associated with investing in Tri Party Repo through CCIL (TREPS)

The mutual fund is a member of securities segment and Tri-party Repo trade settlement of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments.

CCIL maintains prefunded resources in all the clearing segments to cover potential losses arising from the default member. In the event of a clearing member failing to honour his settlement obligations, the default Fund is utilized to complete the settlement. The sequence in which the above resources are used is known as the "Default Waterfall".

As per the waterfall mechanism, after the defaulter's margins and the defaulter's contribution to the default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution if there is a residual loss, it is appropriated from the default fund contributions of the non-defaulting members.

Thus the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. In addition, the fund contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member).

However, it may be noted that a member shall have the right to submit resignation from the membership of the Security segment if it has taken a loss through replenishment of its contribution to the default fund for the segments and a loss threshold as notified have been reached. The maximum contribution of a member towards replenishment of its contribution to the default fund in the 7 days (30 days in case of securities segment) period immediately after the aforementioned loss threshold having been reached shall not exceed 5 times of its contribution to the Default Fund based on the last re-computation of the Default Fund or specified amount, whichever is lower.

Further, it may be noted that, CCIL periodically prescribes a list of securities eligible for contributions as collateral by members. Presently, all Central Government securities and Treasury bills are accepted as collateral by CCIL. The risk factors may undergo change in case the CCIL notifies securities other than Government of India securities as eligible for contribution as collateral.

Risk factors associated with creation of segregated portfolios

- 1. Liquidity risk** – A segregated portfolio is created when a credit event occurs at an issuer level in the scheme. This may reduce the liquidity of the security

issued by the said issuer, as demand for this security may reduce. This is also further accentuated by the lack of secondary market liquidity for corporate papers in India. As per SEBI norms, the scheme is to be closed for redemption and subscriptions until the segregated portfolio is created, running the risk of investors being unable to redeem their investments. However, it may be noted that, the proposed segregated portfolio is required to be formed within one day from the occurrence of the credit event.

Investors may note that no redemption and subscription shall be allowed in the segregated portfolio. However, in order to facilitate exit to unit holders in segregated portfolio, AMC shall list the units of the segregated portfolio on a recognized stock exchange within 10 working days of creation of segregated portfolio and also enable transfer of such units on receipt of transfer requests. For the units listed on the exchange, it is possible that the market price at which the units are traded may be at a discount to the NAV of such Units. There is no assurance that a deep secondary market will develop for units of segregated portfolio listed on the stock exchange. This could limit the ability of the investors to resell them.

2. Valuation risk - The valuation of the securities in the segregated portfolio is required to be carried out in line with the applicable SEBI guidelines. However, it may be difficult to ascertain the fair value of the securities due to absence of an active secondary market and difficulty to price in qualitative factors.

Risk factors associated with investing in Preference Shares

- **Credit Risk** - Investments in Preference Shares are subject to the risk of an issuer's inability to meet dividend and redemption by the issuer. Further, for non-cumulative preference shares, issuer also has an option to not pay dividends on preference shares in case of inadequate profits in any year.
- **Liquidity Risk** - Preference shares lack a well-developed secondary market, which may restrict the selling ability of the Scheme(s) and may lead to the Scheme(s) incurring losses till the security is finally sold.
- **Unsecured in nature** - Preference shares are unsecured in nature and rank lower than secured and unsecured debt in hierarchy of payments in case of liquidation. Thus, there is significant risk of capital erosion in case the company goes into liquidation.
- **Market Risk** - The schemes will be vulnerable to movements in the prices of securities invested by the schemes which could have a material bearing on the overall returns from the schemes.

Risks associated with Investing in Structured Obligation (SO) & Credit Enhancement (CE) rated securities:

- The risks factors stated below for the Structured Obligations & Credit Enhancement are in addition to the risk factors associated with debt instruments.
- Credit rating agencies assign CE rating to an instrument based on any identifiable credit enhancement for the debt instrument issued by an issuer. The credit enhancement could be in various forms and could include guarantee, shortfall undertaking, letter of comfort, etc. from another entity. This entity could be either related or non-related to the issuer like a bank, financial institution, etc. Credit enhancement could include additional security in form of pledge of shares listed on stock exchanges, etc. SO transactions are asset backed/ mortgage backed securities, securitized paper backed by hypothecation of car loan receivables, securities backed by trade receivables, credit card receivables etc. Hence, for CE rated instruments evaluation of the credit enhancement provider, as well as the issuer is undertaken to determine the issuer rating. In case of SO rated issuer, the underlying loan pools or securitization, etc. is assessed to arrive at rating for the issuer
- **Liquidity Risk:** SO rated securities are often complex structures, with a variety of credit enhancements. Debt securities lack a well-developed secondary market in India, and due to the credit enhanced nature of CE securities as well as structured nature of SO securities, the liquidity in the market for these instruments is adversely affected compared to similar rated debt instruments. Hence, lower liquidity of such instruments, could lead to inability of the scheme to sell such debt instruments and generate liquidity for the scheme or higher impact cost when such instruments are sold.
- **Credit Risk:** The credit risk of debt instruments which are CE rated derives rating based on the combined strength of the issuer as well as the structure. Hence, any weakness in either the issuer or the structure could have an adverse credit impact on the debt instrument. The weakness in structure could arise due to ability of the investors to enforce the structure due to issues such as legal risk, inability to sell the underlying collateral or enforce guarantee, etc. In case of SO transactions, comingling risk and risk of servicer increases the overall risk for the securitized debt or assets backed transactions. Therefore, apart from issuer level credit risk such debt instruments are also susceptible to structure related credit risk.

➤ Risks associated with Repo Transactions in Corporate Debt Securities

Lending transactions:

The scheme may be exposed to counter party risk in case of repo lending transactions in the event of the counterparty failing to honour the repurchase agreement. However in repo lending transactions, the collateral may be sold and a loss is realized only if the sale price is less than the repo amount. The risk may be further mitigated through over-collateralization (the value of the collateral being more than the repo amount). Further, the liquidation of underlying securities in case of counterparty default would depend on liquidity of the securities and market conditions at that time. It is endeavoured to mitigate the risk by following an appropriate counterparty selection process, which include their credit profile evaluation and over-collateralization to cushion the impact of market risk on sale of underlying security.

Borrowing transactions:

In the event of the scheme being unable to pay back the money to the counterparty as contracted, the counter party may dispose of the assets (as they have sufficient margin). This risk is normally mitigated by better cash flow planning to take care of such repayments. Further, there is also a Credit Risk that the Counterparty may fail to return the security or Interest received on due date. It is endeavoured to mitigate the risk by following an appropriate counterparty selection process, which include their credit profile evaluation.

Risk Factors associated with schemes investing in Gilt Securities

Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The extent of fall or rise in prices is a function of the existing coupon, days to maturity and the increase or decrease in interest rates. Price-risk is not unique to government securities but is true for all fixed income securities. The default risk however, in respect of Government securities is zero. Therefore, their prices are influenced only by movement in interest rates in the financial system. On the other hand, in the case of corporate or institutional fixed income securities, such as bonds or debentures, prices are influenced by credit standing of the issuer as well as the general level of interest rates.

Even though the Government securities market is more liquid compared to other debt instruments, on occasions, there could be difficulties in transacting in the market due to extreme volatility or unusual constriction in market volumes or on occasions when an unusually large transaction has to be put through.

Risk Factors Associated with Investments in REITs and InvITs:

Market Risk:

REITs and InvITs are volatile and prone to price fluctuations on a daily basis owing to market movements. Investors may note that AMC/Fund Manager's investment decisions may not always be profitable, as actual market movements may be at variance with the anticipated trends. The NAV of the Scheme is vulnerable to movements in the prices of securities invested by the scheme, due to various market related factors like changes in the general market conditions, factors and forces affecting capital market, level of interest rates, trading volumes, settlement periods and transfer procedures. The scheme will undertake active portfolio management as per the investment objective to reduce the market risk.

Liquidity Risk:

As the liquidity of the investments made by the Scheme(s) could, at times, be restricted by trading volumes and settlement periods, the time taken by the Mutual Fund for liquidating the investments in the scheme may be high in the event of immediate redemption requirement. Investment in such securities may lead to increase in the scheme portfolio risk. The fund will try to maintain a proper asset-liability match to ensure redemption payments are made on time and not affected by illiquidity of the underlying units.

Reinvestment Risk:

Investments in REITs & InvITs may carry reinvestment risk as there could be repatriation of funds by the Trusts in form of buyback of units or dividend pay-outs, etc. Consequently, the proceeds may get invested in assets providing lower returns. However, the reinvestment risk will be limited as the proceeds are expected to be a small portion of the portfolio value.

Investors are requested to note that EUIIN is largely applicable to sales persons of non individual ARN holders (whether acting in the capacity of the main distributor or sub broker). Further, EUIIN will not be applicable for overseas distributors who comply with the requirements as per AMFI circular CIR/ ARN-14/12-13 dated July 13, 2012.
